AB GameRoom

Free public beta | Version 0.13.7

Account and download

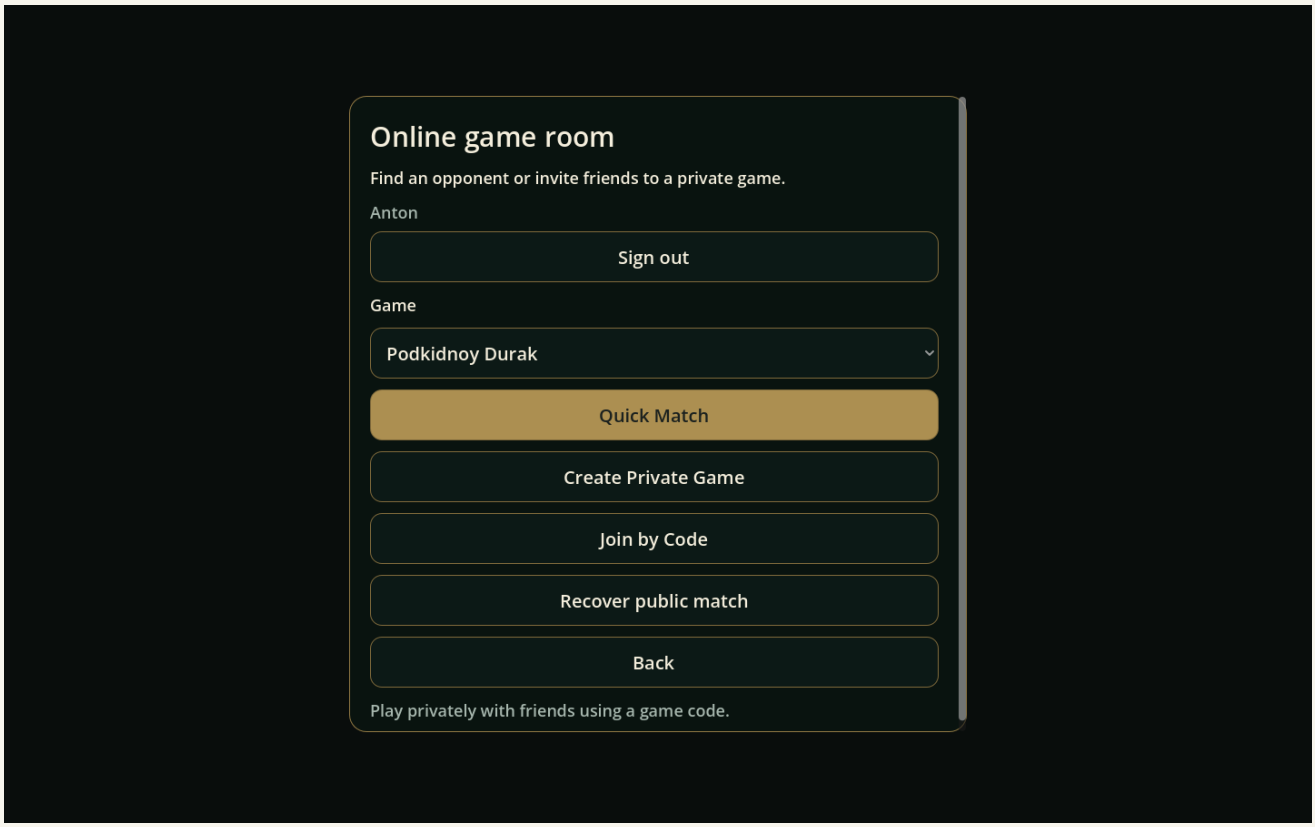

Register at https://play.abvisualstudio.com/beta/ with your name, email and a 6–128 character password. Marketing consent is optional and stored separately. Resend delivers verification. You may download after login before verification. Every game mode requires one successful native-client login; online play also requires verified email. The client can remember a revocable session in the OS credential store without saving the password. ZIP files are protected; the signed manifest remains public.

Install and offline play

Extract AB-GameRoom-macOS-0.13.7.zip and move AB GameRoom to Applications, or fully extract AB-GameRoom-Windows-0.13.7.zip to a writable folder and open DURAK/DURAK.exe. macOS is locally signed but not notarized; Windows is unsigned. Verify SHA-256 and never disable OS or HTTPS protection. With a remembered session from a successful login, Single Player remains available during temporary network outages.

Language and portrait

Choose EN/RU/ES, name and a built-in portrait. An imported photo remains local and friends see a built-in fallback. Help and preferences work offline.

Quick Match

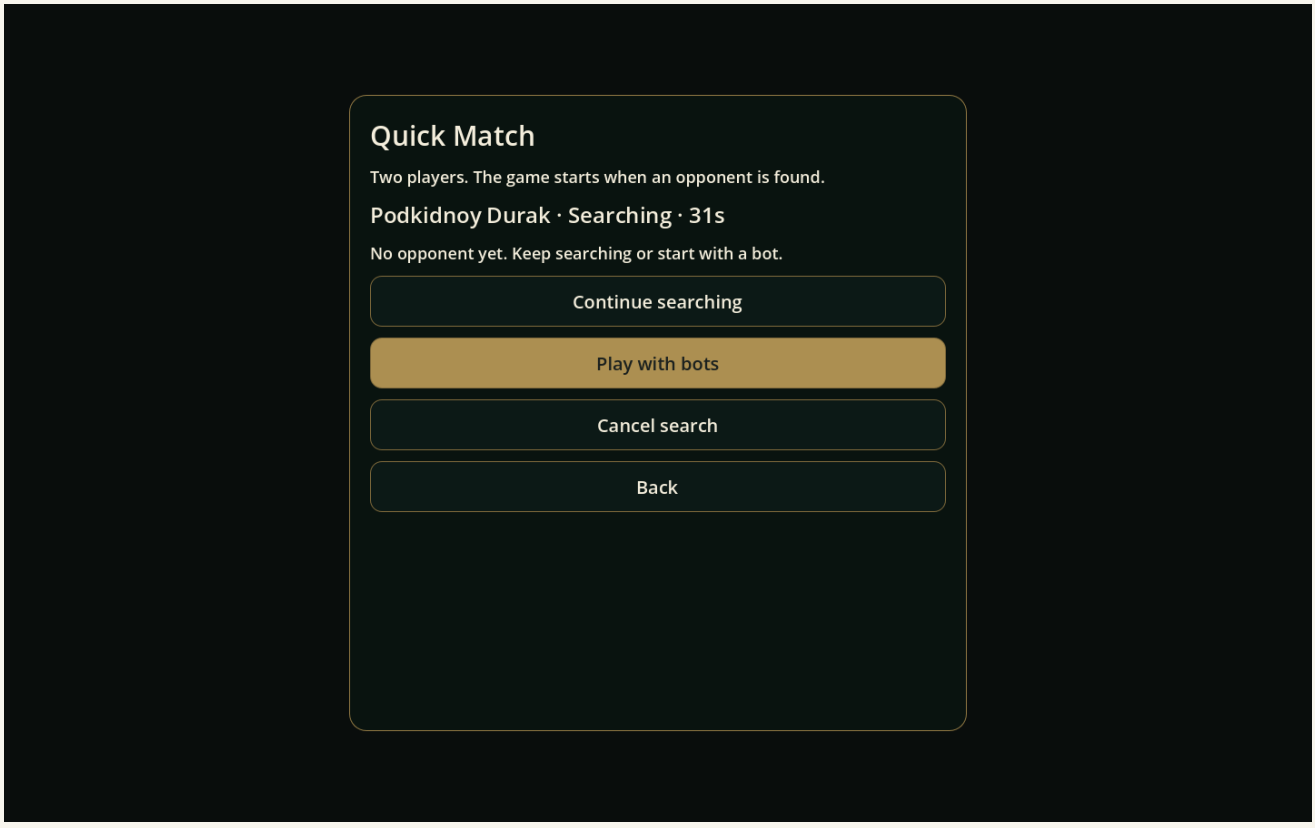

Quick Match has separate server-authoritative queues for Durak, Texas Hold’em and Blackjack. For Hold’em choose 2–6 seats (default 4) and see the live lobby immediately. When the requested table is full it starts at once; after three minutes the server fills remaining seats with clearly identified bots. A running table never accepts a late matchmaking player.

Private games

Create Private Game and Join by Code preserve private rooms for all three games. Share the eight-character code privately. The organizer controls start, pause and moderation. Empty seats use identified bots; late humans never inherit a dealt hand.

Chat and history

Room / Chat and Hand History / Game Log stay in the collapsible dock below the table. Never put passwords, email, session tokens, reconnect credentials or personal data in chat.

Timer and next round

The server owns the turn timer. Hold’em times out to Check when legal, otherwise Fold; Durak uses safe passive actions and Blackjack stands. The next round starts automatically after 10 seconds; Next may start sooner, and shared pause suspends the countdown.

Safe reconnect

A disconnected seat has 60 seconds of grace before passive automatic play. Reservation lasts up to 10 minutes and is released only at a safe boundary. Reconnect restores the current authoritative state without duplicate cards, chips or actions. Keep local recovery data.

Play-money only

Chips and scores are play-money counters: no purchase, transfer for value, cash-out, betting or real-money service.

Updates from 0.10.12

The game reads https://play.abvisualstudio.com/software/version.json over validated HTTPS. New clients authenticate protected archives with the native bearer route and verify release/package signatures, SHA-256 and size. Version 0.10.12 cannot authenticate protected archives: download 0.13.7 manually once through https://play.abvisualstudio.com/beta/.

Connectivity, telemetry and country

Online play uses wss://play.abvisualstudio.com/game. Registration, login, admitted download, launch, presence, queue and game lifecycle events support operation and aggregate analytics. Launch telemetry uses a random local installation ID, platform and version, with a bounded offline retry queue; it does not use a hardware fingerprint. Installations are not people, and an admitted download request does not prove a completed download or launch. The online server and solo Domino client ask api.country.is for country only. Other players see display identity and country code, never email or raw IP; no city or precise location is requested.

Support

Confirm verified email, current version and normal outbound HTTPS/WSS on port 443. Do not bypass certificate warnings. Send support only version, OS, approximate time and a screenshot without secrets. https://abvisualstudio.com
